

Andres Irarragorri

DevOps and Backend engineer progressing toward platform and infrastructure engineering. Having gained direct exposure to the discipline, I am seeking a role in which to deepen that expertise and contribute to more substantial infrastructure initiatives.

CAREER IMPACTS AND HIGHLIGHTS

- Helped ship the [IBM Data Integration Agent](#) from proof-of-concept to cloud-production release.
- Authored the pod Helm charts for a small Kubernetes suite, secured with network policies, service connections, and SSL
- Engineered the CI/CD pipeline E2E — tests gating release candidates, security scans, artifact publishing and DB maintenance.
- Designed the [migration of parameter-set-backed connections](#) with the use of object-oriented design and Redis-backed caching.
- Coordinated upstream and downstream integrations across service teams to deliver highly-integrated SaaS microservices from the ground up
- Built a universal developer tool that provisions a full local cluster, standardizing setup across the team.
- Merged 1,275 pull requests and closed 910 issues — a sustained, high-throughput delivery record since 2021.
- Lead the team's DevOps workflow — triaging and delegating issues and running scrum.
- Organized and hosted two team retreats for 10–12 engineers.

EXPERIENCE

DataStage is an enterprise tool for data engineers to generate ETL pipelines and run them on the cloud.

IBM DevOps Engineer (Band 7) | July 2025 – Current

- [Data Integration Agent](#) — custom agent and MCP tools for DataStage / StreamSets
- Onboarded after the proof of concept, I took a custom agent built on a DataStage SDK with mounted MCP tools from prototype to cloud-production architecture — containerizing five microservice pods and quickly learning to manage versioning, script CI/CD, meet deployment requirements, and reconcile SSL and network communication.

IBM Back End Developer (Band 7) | Jan 2021 – July 2025

- DataStage [Remote Engine](#) and [Migration](#) — hybrid-cloud ETL engine and legacy migration
- On a hybrid-cloud-configurable engine, I built the service-suite components that bridged the control plane and data plane, preparing jobs for the engine and relaying real-time metrics between the two. I also developed migration tooling for a 1990s legacy desktop application, alongside contributing work in automation testing and support scripting.

INDEPENDENT PROJECTS

- [MCP Server - Game Wiki Exhaustive Search](#)
 - Built the MCP tools that answer game questions from live data, with exhaustive-search.
 - Built, containerized, and setup CI & testing for the server.
 - Wrote Claude skills that automate PR creation and GitHub project-board planning.
- Inventory web scraper built for a family-run auto-parts business - In active use
- Python game engine - Where I taught myself to program
- Stock Value Querying Container
 - Learning exercise in service code
- Have built 5 PCs

ROLES, SKILLS & QUALIFICATIONS

<u>Roles</u>	<u>Languages</u>	<u>Tech Stack</u>
• DevOps and Security Compliance	• Java - Service Backend	• Bob/Claude Code - AI workflow/MCP tooling
• Deployment and Quality Assurance	• Python - Service/Scripting/AI	• Jenkins - CICD
• Infrastructure and network policies	• Bash - Scripting	• Docker - Microservice Containerization
• Back-End and API	• Groovy - Jenkins/Gradle	• Kubernetes - Cloud hosting
	• Docker DSL	• Github - Workflow
	• Kubernetes Helm	• Redis - Multipod Architecture/Caching
		• Various Scanning tools - Security Compliance

EDUCATION AND TEACHING/GRADING ASSISTANT

Bachelor of Science in Physics - College of the Holy Cross | Worcester, MA - 2019
